

# Blockchain for Social Impact

Blockchain-based projects can play a vital role in achieving the UN Sustainable Development Goals (SDGs), but the recent report "[Blockchain for Social Impact](#)" by the INATBA Social Impact Working Group indicates a lack of unified standards to measure their social impact. To address this gap, the SIWG is starting an initiative to develop a framework for social impact measurement of blockchain projects.

## Blockchain for the UN SDGs

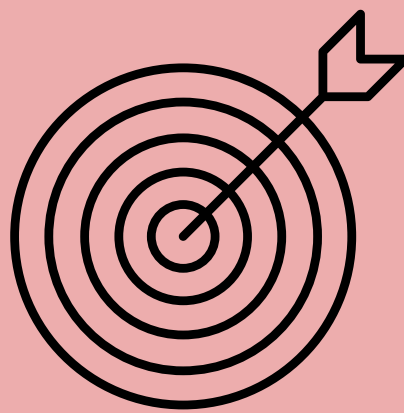

**87.9%**

of respondents considered the SDGs before project implementation

**2 out of 3**

projects stated that the SDGs play a considerable role in their project

**THE GLOBAL GOALS**

**All 17 SDGs**

had corresponding blockchain/DLT projects

## Measuring Impact

More than

**1/2**

of projects use *their own* KPIs to measure impact

More than

**70%**

of projects are looking for standards to support impact measurement

## It's Time to Take Action

and enhance cooperation among blockchain projects to act on pressing social issues

The SIWG is looking for experts, advisors and stakeholders like you to support the development of the standard framework for social impact measurement.
